WHAT IS WEALTH?

A household’s wealth, or net worth, is defined as the sum of its assets minus its debts. Assets are all resources that a household holds in store; the bank of reserves a family has available to invest in its members and their futures. Many assets accumulate in value and generate interest income. Just as importantly, asset wealth provides a cushion, protecting families from the vicissitudes of the economic cycle, as wealth assets may be drawn down during periods of crisis (a job loss, for example). Financial assets include savings, bonds, certificates of deposit, stocks, mutual fund investments, retirement pensions, and the like. Nonfinancial assets include homes, other real estate, vehicles, ownership of a privately held business, and all sorts of other property—from rare baseball cards to jewelry or hobby equipment. Debts are liabilities—credit card balances, mortgages, and other loans—that are owed. —Adria Scharf

Note: Some studies define wealth differently. Because Wolff subtracts the value of automobiles, his figures show a higher percentage of the population with zero or negative wealth than studies that include cars as wealth.
